

Applications in the Department of Defense and Federal Civilian Agencies

VBrick™ offers the ability to capture, record, manage, distribute, and access all video content across an organization's network infrastructure. With thousands of Federal customers, many Agencies have made VBrick the standard for video streaming within their Enterprise. Applications include Mission-Critical or "In Theater" or "First Responder" applications supporting the men and women at the front lines, and Non-Mission Critical applications supporting operations and internal communications. VBrick's scalable and reliable video communications solutions are installed using existing IP networks to deliver live or on-demand information to U.S. Federal employees and their constituencies.

MISSION VIDEO: Store and Forward

Intelligence, Surveillance and Reconnaissance (ISR)

Government agencies require situational awareness provided by real-time video surveillance systems. An IP-video solution from VBrick can enhance a traditional analog video solution by extending its reach to remote locations. In addition, IP-based systems can be used over hard wired, wireless, or satellite networks, allowing monitoring personnel to have more flexibility.

360° Training Ranges

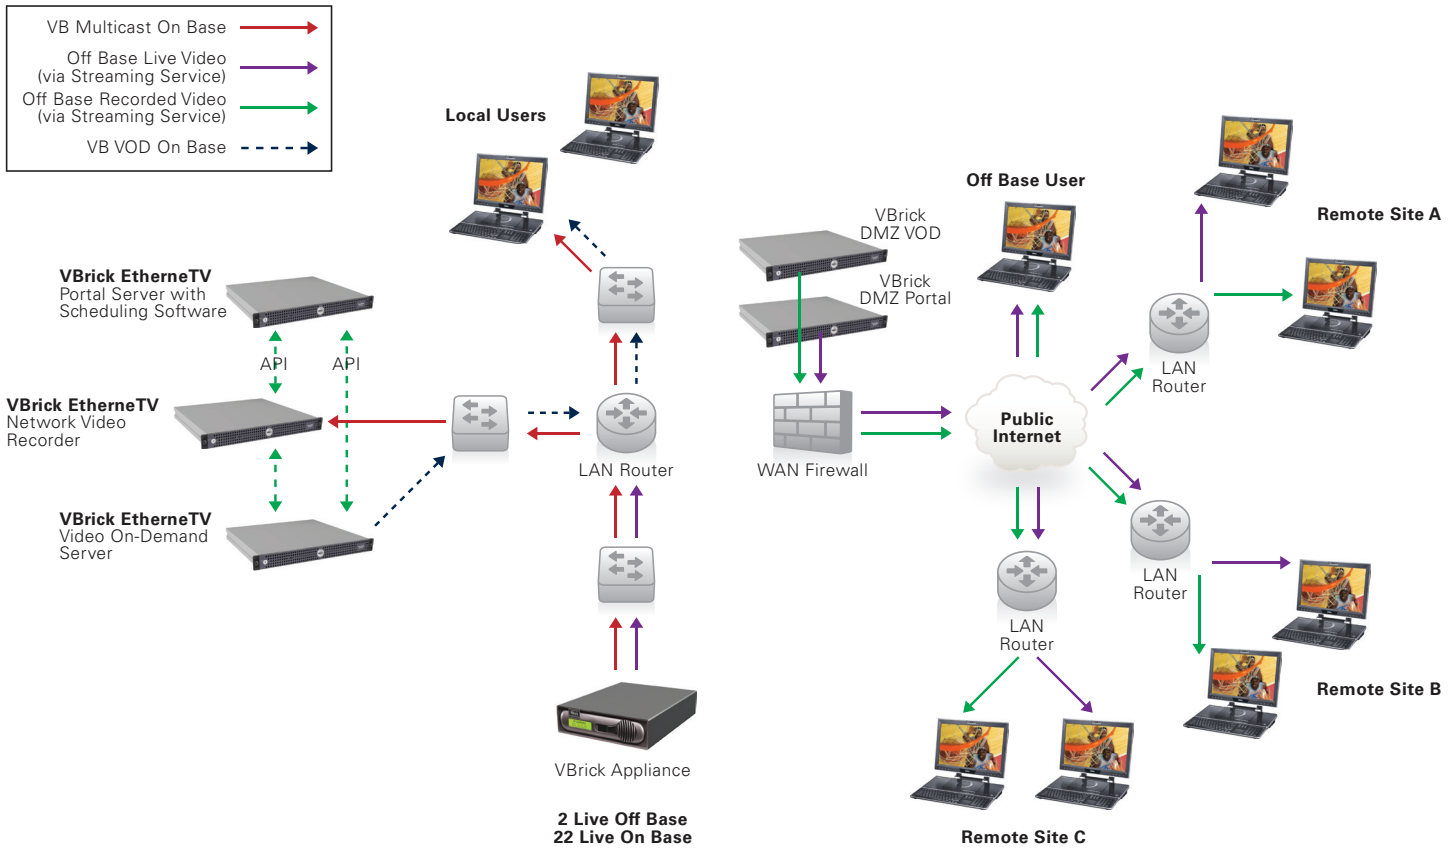

A 360° view of training exercises is required to fully assess the effectiveness of the troops and equipment. VBrick provides multiple live video streams that are recording simultaneously, then uploaded to a server and searchable for After Action Reviews (AAR).

Inter-Agency Cooperation for Emergency Disasters

Regardless of what network connectivity is available, VBrick enables mobile units to deliver live video feeds simultaneously from a disaster area to multiple governmental agencies including federal, state and local. This ensures the seamless flow of current on-the-scene information between cross-functional agencies and activities of the various command and control operation centers.

NON-MISSION VIDEO: Internal and Internet Distribution

Commander Briefings

Commanders need to communicate to personnel quickly and effectively, but delivering a clear, consistent message can be difficult. An IP-video solution is a powerful tool that can deliver your commander's message to all personnel instantaneously.

Event Broadcasts

Government employees are typically traveling worldwide on a regular basis. Many of these employees miss key agency or family events like high school graduations, weddings and funerals. VBrick's IP-video solution enables you to deliver both live and recorded events easily over any IP network to any location.

News Distribution

Federal agencies need to deliver late breaking news directly to desktops as full screen, full motion video. This includes public news networks such as CNN, CNBC, and Fox News, or private government news channels. VBrick's IP solutions can deliver any television feed directly to desktops over both local and wide area networks. The system can save costs by eliminating duplicate analog distribution systems and provide a wider reach, delivering video to both wired and wireless devices.

Personnel Training

It is more important than ever to quickly get new personnel productive in their new job. With an IP-video solution from VBrick you can provide training to all new personnel instantly, ensuring the delivery of a consistent message, improving audience retention, and saving money by reducing the time it takes to prepare training materials and production, such as print and other mass produced media.

VBrick is the most widely used IP-video system in the U.S. government including:

- All the branches of the military: U.S. Army, U.S. Air Force, U.S. Navy, U.S. Marine Corps
- U.S. Military Academies: West Point, U.S. Airforce Academy, U.S. Maritime Academy, U.S. Naval Academy, Navy Postgraduate School, Naval War College, Army War College, U.S. Coast Guard Academy
- Department of Defense
- Department of Energy
- Department of Health and Human Services
- Department of Homeland Security
- Department of the Interior
- Department of Justice
- U.S. Coast Guard
- Department of Treasury
- Department of Veteran's Affairs
- Environmental Protection Agency
- Federal Aviation Administration
- Federal Deposit Insurance Corporation
