

## VBPresenter is the next generation of live multimedia presentation tools.

Using Microsoft Silverlight, VBPresenter provides a rich, interactive viewing experience that perfectly synchronizes your PowerPoint presentation with your live video for delivery to both Windows and Apple computers.

### Capabilities

VBPresenter allows anyone, anywhere to deliver a webcast over any network. Simply press a few buttons within PowerPoint and you are instantly “on the air”, delivering live audio/video and synchronized multimedia to viewers on the public Internet and within your local area network. Unlike other systems, there is virtually nothing new to learn - if you know how to use PowerPoint, you know how to give a presentation online.

**Live Video Synchronized with Multimedia** – VBPresenter synchronizes the video from your VBrick appliance with PowerPoint® slides, web pages, and/or online polls.

**Advanced Interactive Viewing Experience** – Viewers can select size, full screen, Picture-in-Picture, and navigation options.

**Live Q&A** – End users can simply “Ask a Question” and the presenter can view the questions and respond to them instantly.

**Record and Publish** – Live presentations can be recorded and published with one click. The presentation remains perfectly synchronized for on demand playback.

**Guided Web Browsing** – The presenter can browse to web pages and VBPresenter guides the viewers to the same page.

**Polling** – Conduct audience polls and view the results instantly.

**Automatic E-mail Generation** – An e-mail with the URL of the presentation can be automatically generated to invite viewers to the presentation.

**Reference Material** – Reference material can be posted in the presentation for download by viewers.

### Models

7500-0167 – VBPresenter software

### Compatibility

- Windows-based PCs
- Mac PCs

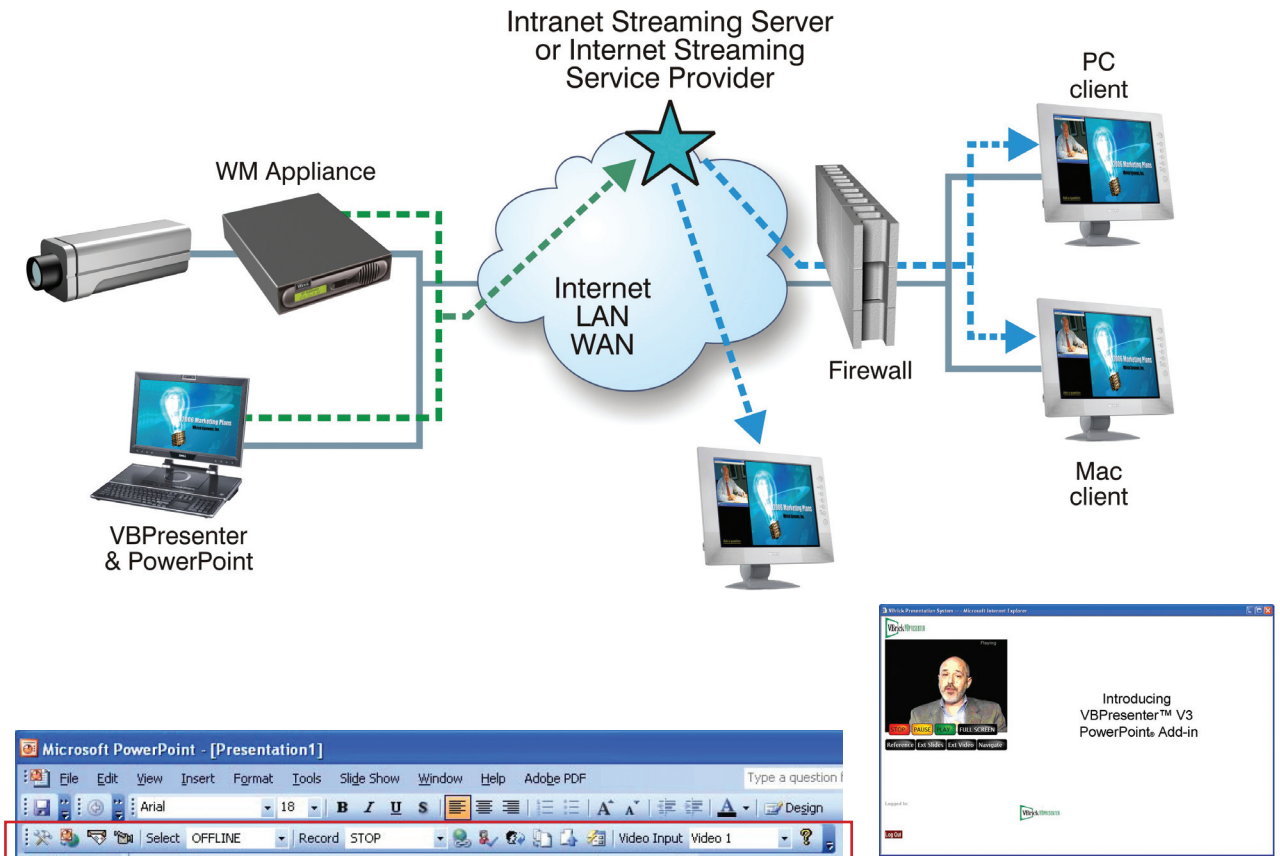

### Interoperability

- VBrick Windows Media appliances
- EtherneTV Portal Server
- VBrick VOD-WM Video on Demand servers

### Benefits

- Robust - uses VBrick’s industry leading networked video appliances.
- Simple - requires virtually no training to use.
- Universal - Presentations may be viewed on both Windows and Apple computers via IE, Firefox, and Safari browsers.
- Single person operation - no need for a large production team
- No recurring costs - rides on your existing IP network
- Eliminates travel costs

**VBPresenter**
